NOAA Technical Memorandum NMFS

The National Oceanic and Atmospheric Administration (NOAA), organized in 1970, has evolved into an agency which establishes national policies and manages and conserves our oceanic, coastal, and atmospheric resources. An organizational element within NOAA, the Office of Fisheries is responsible for fisheries policy and the direction of the National Marine Fisheries Service (NMFS).

In addition to its formal publications, the NMFS uses the NOAA Technical Memorandum series to issue informal scientific and technical publications when complete formal review and editorial processing are not appropriate or feasible. Documents within this series, however, reflect sound professional work and may be referenced in the formal scientific and technical literature.

NOAA Technical Memorandum NMFS

This TM series is used for documentation and timely communication of preliminary results, interim reports, or special purpose information; and have not received complete formal review, editorial control, or detailed editing.

ABSTRACT

This report provides ichthyoplankton and associated station and tow data from California Cooperative Oceanic Fisheries Investigations (CalCOFI) cruises conducted off California and Baja California in 1972. It is the twentieth report in a series that presents these data for all biological-oceanographic CalCOFI surveys from 1951 to the present. A total of 1205 stations was occupied during six monthly multivessel cruises over the survey area which extended from the California-Oregon border to Cabo San Lucas, Mexico, and seaward to several hundred miles. The data are listed in a series of 6 tables; the background, methodology, and information necessary for interpretation and quantitative analysis of the data are presented in an accompanying text. All pertinent station and tow data, including volumes of water strained and standard haul factors, are listed in the first table. Another key table lists, by station and month, standardized counts of each of the 185 larval fish categories identified from survey samples. This and previous and subsequent reports make the CalCOFI ichthyoplankton and station data available to all investigators and serve as guides to the newly developed computer data base.

INTRODUCTION

This report, the twentieth of a series, provides ichthyoplankton and associated station and tow data from California Cooperative Oceanic Fisheries Investigations (CalCOFI) joint biological-oceanographic survey cruises conducted in 1972. This program was initiated in 1949, under the sponsorship of the Marine Research Committee of the State of California, to study the population fluctuations of the Pacific sardine (*Sardinops sagax*) and the environmental factors that may play a role in such fluctuations. CalCOFI, known as the California Cooperative Sardine Research Program from 1949 to 1953, was made up of representatives of the South Pacific Fisheries Investigations (SPFI) of the U.S. Fish and Wildlife Service [now the La Jolla Laboratory, National Marine Fisheries Service (NMFS)], the Scripps Institution of Oceanography (SIO), the California Department of Fish and Game (CDFG), the California Academy of Sciences (CAS) and the Hopkins Marine Station of Stanford University. The first three of these agencies supplied ships and personnel to conduct the sea surveys. NMFS processed the plankton samples and analyzed the ichthyoplankton from them. SIO processed and analyzed the hydrographic samples and measurements and also analyzed invertebrate groups from the plankton samples.

The boundaries, station placement, and sampling frequency for the CalCOFI survey area were based on the results of joint biological and oceanographic cruises conducted by NMFS and SIO during 1939-41. Those cruises were designed to collect sardine eggs and larvae and associated hydrographic data over the entire areal and seasonal spawning range of the species. On these survey cruises, plankton tows were made to 70 m, a depth which

encompassed the vertical distribution of sardine eggs and larvae. Wide-ranging joint biological and oceanographic survey cruises were resumed in 1949 with sardine as the focus; however, an increasing interest in other biological components resulted in the deepening of standard tows to 140 m in 1951. This marked the beginning of truly quantitative ichthyoplankton sampling on CalCOFI surveys.

Some data resulting from CalCOFI surveys in 1972 have been published. Hydrographic data (Univ. of Calif., SIO, 1980, 1982, 1985) were presented in standard formats. Distributional maps of larvae of 2 taxa taken on CalCOFI surveys during 1972 are presented in the CalCOFI atlas series: rockfish (*Sebastes* spp.), Ahlstrom et al., 1978; and northern anchovy (*Engraulis mordax*), Hewitt, 1980.

A computer data base for eggs and larvae of sardine and anchovy, for larvae of Pacific hake (*Merluccius productus*), jack mackerel (*Trachurus symmetricus*) and Pacific mackerel (*Scomber japonicus*), and for eggs of Pacific saury (*Cololabis saira*) was established in 1969. The development of a data base for other fish larvae is a complex undertaking because competency of identification has evolved steadily over the past 38 years. We began the task of producing a CalCOFI ichthyoplankton data base and associated data report series in 1983. All available original records for 1972 were subjected to an extensive verification and editing process to produce this report. This and previous (Ambrose et al., 1987a,b,c; 1988a,b; Sandknop et al., 1987a,b; 1988a,b,c; Stevens et al., 1987a,b,c; 1988a,b; Sumida et al., 1987a,b; 1988a,b) and subsequent reports make the CalCOFI ichthyoplankton and station data available to all investigators and serve as guides to the computer data base. The data base will be modified when additional errors are discovered and when composite taxa from the earlier years are reidentified. These reports are the fundamental reference documents against which subsequent changes in the data base can be compared.

SAMPLING AREA AND PATTERN

In 1972, six CalCOFI survey cruises were conducted from January through November. Cruise 7202 in February was a joint U.S.-U.S.S.R. cooperative cruise with the Soviet vessel *Alba* sampling lines 40-77 (Figure 4). Two cruises in late spring and early fall (Cruises 7205 and 7210) covered an extended pattern designed to collect data across the California Current from 45°N to 20°N. However, data from stations north of line 40 and extended offshore lines are not included in this report. They will be incorporated into the data base at a later time and published as a separate data report. A total of 1205 stations included in this data base was occupied with an average of 201 stations per cruise (range 133-336). Coverage of the survey station pattern varied among cruises with the most extensive occurring in February, April-early June, and September-November (Figures 1-8, Table 1). The area off northern California (lines

40-57) was covered on all cruises except those in January and March. Coverage off central California (lines 60-77) was more consistent with all major lines occupied except in cruises 7205 and 7210 during which only two cardinal lines were surveyed. The area between Pt. Conception, California and Pt. San Juanico, Baja California (lines 80-137) was surveyed on all cruises (only cardinal lines were occupied in cruises 7205 and 7210). The area off southern Baja California (lines 140-157) was surveyed on three cruises (7202, 7205, 7210). Coverage extended seaward to station 140 (approximately 400-500 miles offshore) on a few lines in cruises 7205 and 7210, but typically did not extend beyond station 90 (approximately 160-260 miles offshore) on other cruises.

Four vessels were employed on these cruises: the *David Starr Jordan* of NMFS, the *Alexander Agassiz* of SIO, the *Alaska* of CDFG, and the *Alba* of the Soviet Union. Two to four vessels participated on each cruise with the *David Starr Jordan* and *Alexander Agassiz* being used on all six (Table 1; Univ. of Calif., SIO, 1980, 1982, 1985).

After 1969, CalCOFI surveys were made on a triennial basis. These began in 1972 and continued every 3 years (1975, 1978, 1981, 1984) until 1985 when annual surveys were resumed.

SAMPLING GEAR AND METHODS

During 1972, a 1-m diameter ring net was used on all cruises; the net was similar to that used on previous surveys except the fabric was 0.505 mm nylon mesh instead of silk bolting cloth (Smith, 1974). The cod end was constructed of 0.333 mm nylon mesh. The frame was fastened to a short 3-lead bridle connected to several meters of line which attached to the towing cable by a clamp. A current meter was suspended in the center of the mouth of each net to measure volume of water filtered (see Kramer et al., 1972, for further details).

¹CalCOFI lines (Figure 9) are arranged perpendicular to the coastline and extend from the Canadian border (line 10) to below Cape San Lucas, Baja California (line 157). Stations were established on the basis of a perpendicular to line 80 (off Pt. Conception) at a point designated as station 60. Stations were plotted seaward and shoreward from station 60 on each line. Cardinal CalCOFI lines (those ending in "0") are 120 miles apart and usually bracket two ordinal lines (ending in "3" or "7"), so that lines are 40 miles apart over most of the pattern. Cardinal stations are 40 miles apart and typically these are separated by a station number ending in "5" so that stations are 20 miles apart out to station 90 on most lines. Stations are placed at closer intervals near the coast and islands to accommodate these features (see Kramer et al., 1972 for further details).

The standard tow in 1972 was an oblique haul to ca. 210 m depth (to 15 m of the bottom in shallow areas) designed to filter a constant amount of water per depth interval (ca. $3\text{m}^3/\text{m}$ of depth) over the vertical range of most ichthyoplankters. Hauls were made at a ship speed of 1.5-2.0 knots and initiated by clamping the net line to the towing cable with the 45 kg terminal weight about 10-15 m below the surface. The net was lowered to ca. 210 m depth by paying out 300 m of wire over a 6 minute period (35 m of depth/min.). After fishing at depth for 30 seconds, the net was retrieved at 20 m/min. (14 m depth/min.). The angle of stray of the towing cable was recorded every 30 seconds and maintained at 45° ($\pm 3^\circ$) by adjusting the ship speed and course. After reaching the surface, the net was washed down and the samples preserved in 5% formalin buffered with sodium borate. Flowmeter readings were made at the beginning and end of each tow. Detailed descriptions of gear and methods are given by Kramer et al. (1972), and Smith and Richardson (1977).

LABORATORY PROCEDURES

Laboratory processing began with the determination of a displacement volume for each sample (methods described in Staff, SPFI, 1953 and Kramer et al., 1972). Sorting involved the removal of ichthyoplankton from the sample and identification and separation of: eggs and larvae of Pacific sardine and northern anchovy; larvae of Pacific hake; and eggs of Pacific saury. Usually, each sample was sorted completely; however, in 1972, some of the samples from two of the six cruises were fractioned into aliquots using a Folsom plankton splitter (McEwen et al., 1954) prior to sorting. Samples collected in Cruise 7202 by the Soviet research vessel *Alba* were fractioned to 50% of the original volume. Samples from Cruise 7207 were fractioned to a 25% aliquot if the sample was collected within 200 miles from the coast and its original volume exceeded 25 ml (J. R. Thrailkill, pers. comm.). Aliquot percentages for fractioned samples from 1972 are listed in Table 1 under the "Percent Sorted" column.

A "standard haul factor" (SHF) was calculated for each tow to make them comparable and allow estimations of areal abundance. This factor adjusts the number of eggs or larvae in a haul to the number in 10 m^3 of water strained per meter of depth fished. If the vertical distribution of the species has been encompassed, then the adjusted value is equivalent to the number under 10 m^2 of sea surface. The SHF is calculated for each haul by the formula:

$$\text{SHF} = \frac{10}{V} D$$

where D = depth of haul = cosine of the average angle of stray of the towing cable multiplied by cable length (m)

$V =$ total volume of water (m^3) strained
during the haul

$$V = R \cdot a \cdot p$$

where $R =$ total number of revolutions of the current meter during the haul

$a =$ area (m^2) of the mouth of the net

$p =$ length of column of water (m) needed to produce one revolution of the current meter.

Tow depth, volume of water strained, and standard haul factor are listed in Table 1 for each tow taken during 1972. Detailed descriptions of factors involved in calculating these values are presented in Ahlstrom (1948), Kramer et al. (1972), and Smith and Richardson (1977).

IDENTIFICATION

Identification of ichthyoplankton species beyond those separated during the sorting process was carried out by a separate group of specialists. Ontogenetic stages of fishes are inherently difficult to identify and this is further complicated by the large number and diversity of species which contribute to the ichthyoplankton of the California Current region. Most identifications were accomplished by establishing ontogenetic series on the basis of morphology, meristics, and pigmentation and then identifying these series by relating them to known metamorphic, juvenile, or adult stages with overlapping features (Powles and Markle, 1984). A total of 183 taxa was identified for 1972, with 108 taken to species, 32 to genus, 36 to family, and 7 to order or suborder. In 1972, some taxonomic groups were identified for the first time. These included larvae of the bathylagid species *Bathylagus longirostris*, the gonostomatids *Danaphos oculatus* and *Valencienellus stellatus*, and the myctophid *Bolinichthys* species. Larvae in the families Scopelarchidae and Nomeidae were identified to genus or species. Five species of rockfish in the *Sebastes* group were identified: *S. aurora*, *S. jordani*, *S. levis*, *S. macdonaldi*, and *S. paucispinis*. Also, the trichiurid *Lepidopus xantusi* was identified.

The task of producing a reliable and equitable ichthyoplankton data base required extensive procedures to verify, correct, and edit the original identifications. The primary data source was the original identification sheets (see Kramer et al., 1972, for examples); however, a critical resource used in all phases of this process was the CalCOFI ichthyoplankton collection in which the samples are archived. Throughout the course of CalCOFI ichthyoplankton studies, samples have been identified to the lowest taxon possible. In reviewing

these identifications for the data base, our approach has been conservative and we have preserved those identifications and counts which we could confirm, while correcting as many of the errors as possible. After computer entry, taxonomic errors and inconsistencies in the data base were corrected and the most obvious identification errors were corrected. Our current knowledge of ichthyoplankton techniques coupled with a precise understanding of the development of identification competency in the program over the years allowed us to critically judge the historical records. Identifications were changed to different taxa, lumped to a higher taxonomic category, or given a more precise taxonomic name. In some cases, identifications of a taxon were inconsistent among cruises in a year. These records were made equitable by lumping to the higher taxonomic category to avoid biases that could result in quantitative misinterpretation.

Next, statistical, seasonal, and geographic outliers were identified, employing a series of graphic summaries and listings. Examination of geographic outliers proved to be especially effective because of our accumulated knowledge of species distributions. In the course of examining samples for these outliers, other identification errors were discovered and eventually all taxa were scrutinized to some extent. Lastly, certain taxa were reexamined in all samples for the entire CalCOFI time series. These taxa were selected because of their commercial, ecological, phylogenetic, or zoogeographic importance or because taxonomic confusion was at the ordinal level. The following is a list of the taxa for 1972 which received special attention, with explanations and caveats intended to aid in quantitative interpretations:

Anguilliformes - tentative and sporadic identifications to family or lower taxon lumped to order.

Sardinops sagax - all specimens south of line 120 checked for misidentification of *Opisthonema* spp.

Engraulis mordax - some nearshore samples of small *E. mordax* may contain other anchovy genera which could not be differentiated.

Nansenia spp. - all specimens checked and identified as *N. candida* or *N. crassa*; all specimens of these species near their range boundaries checked.

Bathylagus spp. - includes small and/or disintegrated specimens of *Bathylagus* or *Leuroglossus stilbius*.

Bathylychnops exilis - specimen checked.

Dolichopteryx longipes - specimen checked.

Stomiiformes - all specimens checked and identified to family, genus or species; residuals are small, poorly preserved or unavailable specimens.

Cyclothona spp. - tentative and sporadic identifications to species were lumped to genus.

Vinciguerria lucetia - specimens taken seaward of station 100 checked for misidentification of *V. poweriae*; some *V. poweriae* may remain in these samples because small larvae of the two species could not be differentiated; sporadic identification of *V. poweriae* began in 1961.

Sternopychidae - tentative and sporadic identifications of hatchetfishes to genus were lumped to family.

Bathophilus spp. - all specimens checked.

Tactostoma macropus - all specimens checked.

Paralepididae - all specimens examined and identified to species; residuals are small, poorly preserved or unavailable specimens, except specimens south of line 150 which are an unidentified *Lestidiops*-like form.

Scopelarchus spp. - tentative and sporadic identifications to species lumped to genus.

Lampanyctus spp. - tentative and sporadic identifications to species lumped to genus.

Lampanyctus regalis - underrepresented because of inability to differentiate small larvae (<5 mm) from those of other species of the genus; counts may include other species of the genus because of difficulty in identifying larvae of this large and complex genus.

Lampanyctus ritteri - comment for *L. regalis* applies to this species.

Triphoturus mexicanus - specimens seaward of station 100 checked for misidentification of *T. nigrescens*.

Diogenichthys atlanticus - all specimens at margins of range checked.

Diogenichthys laternatus - all specimens at margins of range checked.

Hygophum spp. - all specimens reidentified to species; residuals are small, poorly preserved or unavailable specimens.

Hygophum atratum - all specimens checked.

Hygophum reinhardtii - all specimens checked.

Bregmaceros spp. - tentative and sporadic identifications to species lumped to genus.

Physiculus spp. - specimen checked.

Ophidiiformes - this category did not exist originally and unidentified larvae of this order, including a type referred to as "Zoarcidae", were originally placed in the "blenny" category.

Chilara taylori - all specimens checked.

Ophidion scrippsae - all specimens checked.

Trachipteridae - tentative and sporadic identifications to genus were lumped to family.

Melamphaes spp. - all identifications ascribed to Melamphaidae were reexamined and assigned to genus (*Melamphaes*, *Poromitra*) or species (*Scopelogadus bispinosus*); larvae originally identified as *Melamphaes* spp. were not reexamined and this category may contain other melamphaid genera.

Anoplopoma fimbria - specimen checked.

Cottidae - all specimens checked.

Oxylebius pictus - all specimens checked.

Zaniolepis spp. - all specimens checked.

Blennioidei - this is the residual of the completely reexamined "blenny" category, which also contained various misidentified ophidiiforms, and is now restricted to members of northern stichaeioid families.

Microdesmidae - specimens checked.

Labridae - all specimens originally identified to family were reexamined and assigned to genus (*Halichoeres* spp.) or species (*Oxyjulis californica*); residuals are of an unidentified southern form.

Chromis punctipinnis - records south of about line 120 may include other pomacentrid taxa.

Howella brodiei - all specimens checked; some originally identified as Apogonidae; in this report we list *H. brodiei* in the family Apogonidae for convenience, recognizing that its systematic affinities are not resolved.

Carangidae - all specimens checked; tentative and sporadic identifications to genus or species (except *Trachurus symmetricus* and *Seriola lalandi*) were lumped to family.

Seriola lalandi - specimens checked.

Haemulidae - tentative identification to genus lumped to family.

Medialuna californiensis - all specimens checked.

Caulolatilus princeps - specimen checked.

Sciaenidae - tentative and sporadic identifications to genus lumped to family.

Scombridae - all larvae identified to this family or constituent taxa (except *Scomber japonicus*) were reexamined and in some cases reassigned.

Nomeidae - all specimens checked and identified to species.

Pleuronectiformes - all specimens of this category were examined and reidentified; residuals are small, poorly preserved or unavailable specimens.

Bothidae - all specimens examined and most reassigned to various paralichthyid genera.

Bothus spp. - specimens checked.

Citharichthys spp. - all larvae identified to species were lumped to genus except *C. stigmatus*; category includes larvae of *Etropus* spp.

Citharichthys stigmatus - includes larvae larger than ca. 4.5 mm; smaller larvae are in *Citharichthys* spp.

Paralichthys californicus - all specimens examined.

Xystreurus liolepis - originally misidentified as *Paralichthys californicus*; all specimens reidentified.

Glyptocephalus zachirus - all specimens examined.

Isopsetta isolepis - specimens checked.

Lepidopsetta bilineata - all specimens examined.

Microstomus pacificus - all specimens examined.

Pleuronichthys spp. - all larvae of this genus and constituent species were examined and assigned to species.

Psettichthys melanostictus - all specimens examined.

COMPUTER ENTRY AND EDITING

Each taxon on the original identification sheets was given a 3-digit code based on the list of codes in Haight et al. (1979). Taxon codes and counts from these sheets were keypunched by cruise and station, along with pertinent station and tow data and entered into the VAX 11/780 computer at the University of California, San Diego, Computing Center. After entries were completed for an entire year, print-out listings of taxa and counts on each station were compared with the original data sheets to eliminate keypunch errors. Next, data in the file were cross-checked with data on an existing file which contained: station and tow data; numbers of eggs of sardine, anchovy, and saury; numbers of larvae of sardine, anchovy, hake, jack mackerel, and Pacific mackerel; total number of fish eggs; and total number of fish larvae.

Discrepancies in ichthyoplankton data in these two files were corrected by inspecting original records from the sorting laboratory, the original ichthyoplankton identification sheets, and the samples themselves. Station and tow data discrepancies between the two files were corrected by reviewing ships' logs and deck tow sheets, original records from the sorting laboratory, cruise announcements, publications, header information on the ichthyoplankton identification sheets, and station plots generated for each cruise. Eventually all station and tow data were checked by comparing these sources.

The corrected ichthyoplankton data base was then examined statistically and outliers were found and checked as above. Distributional plots were then prepared for each taxon and these were checked by reviewing the data sources mentioned above and by examining archived specimens. A listing of each taxon by station (Table 4) was produced, which became the primary document for subsequent checks. Misidentifications found in geographic outlier checks and other misidentifications and data problems discovered in the course of examining archived samples resulted in several iterations of Table 4. Finally, totals in Table 4 were checked against annual summaries of incidence and abundance (Tables 2 and 3). Ecological analyses of the data were conducted concurrently with editing procedures and provided cross-checks that allowed correction of errors.

SPECIES SUMMARY

Larvae of northern anchovy (*Engraulis mordax*) represented 43.7% of all fish larvae taken on CalCOFI cruises during 1972 and numbered over three times as many as Pacific hake, *Merluccius productus*, the next most abundant taxon with 13.0% of the total larvae (Tables 2, 3). Northern anchovy also ranked first in incidence; Pacific hake ranked 8th. The next most abundant group was the rockfish genus *Sebastes* spp. with 8.1% of the total, followed by the gonostomatid *Vinciguerria lucetia* with 5.9%; they ranked 2nd and 10th respectively in incidence. The deepsea smelt

Leuroglossus stilbius ranked 5th in abundance (4.7%) and 4th in occurrence. The myctophid *Stenobrachius leucopsarus* and another deepsea smelt, *Bathylagus ochotensis*, ranked 6th (4.6%) and 7th (3.1%) in number, and 6th and 7th in occurrence. The final three taxa in the top 10 collected in 1972 were the myctophid species *Triphoturus mexicanus* with 2.0%, *Tarletonbeania crenularis* with 1.9%, and *Diogenichthys laternatus* with 1.5% of total larvae. These 10 taxa contributed 88.6% to the total number of larvae collected in 1972; the remaining 11.4% was distributed among 173 taxa plus the disintegrated and unidentified categories. The top 10 taxa comprised two coastal demersal species or groups, one coastal pelagic species, and seven midwater species.

EXPLANATION OF TABLES

Table 1 - This table lists by cruise the pertinent station and tow data for 1972, the volume of water filtered and standard haul factor for each tow, the percent of sample sorted, and the total numbers of fish eggs and larvae. CalCOFI cruises are designated by four digits; the first two indicate the year and the second two the month. Within each cruise the data are listed in order of increasing line and station number (southerly and seaward directions); the order of station occupancy is shown on the station charts (Figures 2-8). Stations are designated by two groups of digits; the first set indicates the line and decimal fraction and the second set indicates the station on the line. Time is listed as Pacific Standard Time at the start of each tow in 24-hour designation. Methods for determining tow depth, volume of water strained, standard haul factor, and percent sorted were described in the methods section. The values for total fish eggs and larvae represent raw counts (unadjusted for percent sorted or standard haul factor). Ship codes are as follows: AB, Alba; AL, Alaska; AX, Alexander Agassiz; JD, David Starr Jordan.

Table 2 - This table lists pooled occurrences of all larval fish taxa taken during 1972 in ranked order.

Table 3 - This table lists pooled counts of all larval fish taxa taken during 1972 in ranked order. Numbers are adjusted for percent sorted and standard haul factors.

Table 4 - This table gives numbers of fish larvae for each taxon, listed by station and calendar month in which the tow was taken. Counts are adjusted for percent of sample sorted and standard haul factor. Average values are given for stations occupied more than once during a month. See Table 1 for station and tow data and Table 6 for listing of stations with multiple occupancies during a month. Multiple occupancies occurred when a station was occupied more than once during a calendar

month; in some cases, multiple occupancies resulted from separate cruises. The orders are listed in "phylogenetic" sequence modified from Nelson (1984). Subtaxa within each order are listed alphabetically. Page numbers for each taxon are given in the index at the end of the report.

Table 5 - This table is a summary of pooled occurrences of all larval fish taxa taken on CalCOFI surveys from 1972 to 1981. Taxa are listed in the same order as in Table 4.

Table 6 - List of stations with multiple occupancies in one month during 1972.

ACKNOWLEDGMENTS

Elizabeth Stevens, Elaine Sandknop, Susan D'Vincent, and Connie Fey originally identified larvae from CalCOFI cruises of 1972. Ronald Whyte coded each larval fish taxon or type and Rita Ford entered them into the computer. Cindy Meyer and James Ryan provided programming assistance. Dorothy Roll designed the CalCOFI data acquisition system and provided data processing support. Ken Raymond, Roy Allen, and Henry Orr helped with graphics and production of the report. Lorraine Prescott prepared the manuscript for printing. Paul Smith determined statistical outliers, provided assistance during geographical outlier checks and offered helpful suggestions throughout the project. Izadore Barrett, Director of the Southwest Fisheries Center provided support critical to the completion of the project. James Threlkell planned CalCOFI surveys and supervised cruises, data handling, and plankton sorting from 1949 to 1986 and is largely responsible for the high quality of these operations. Without the vision and direction of Elbert Ahlstrom and Elton Sette and the dedicated efforts of the many people who collected, processed, and analyzed the samples, this data base would not exist. During the final stages of preparing this report, Reuben Lasker succumbed to cancer. As Chief of the Coastal Fisheries Resources Division, SWFC, his encouragement and support for all of us involved in the sea surveys, sample processing, and data base and report preparation were unwavering. We dedicate this work to his memory.

Cruises 7201, 7202. SIO Ref. 80-21.

University of California, Scripps Institution of Oceanography.
1982. Data report: physical and chemical data, CalCOFI
Cruises 7203, 7205. SIO Ref. 82-14.

University of California, Scripps Institution of Oceanography.
1985. Data report: physical and chemical data, CalCOFI
Cruises 7207, 7210. SIO Ref. 85-20.

Figure 1. Composite arrangement of diagrammatic charts showing areas sampled on each CalCOFI cruise during 1972.

Figure 2. Station pattern for CalCOFI Cruise 7201 showing tracks for each vessel. Stations with plankton tows are indicated by a dot; circles designate hydrographic stations, and diamonds STD recordings. Figures 2, 3, and 5-8 were modified from charts in Univ. of Calif., SIO (1980, 1982, 1985) to include only those stations listed in Table 1 of this report.

Figure 3. Station pattern for CalCOFI Cruise 7202 showing tracks for *Alexander Agassiz*, *Alaska*, and *David Starr Jordan*. Symbols as in Figure 2.

Figure 4. Station pattern for CalCOFI Cruise 7202 showing track for Alba. Plankton tow stations indicated by a dot.

Figure 5. Station pattern for CalCOFI Cruise 7203.
Symbols as in Figure 2.

Figure 6. Station pattern for CalCOFI Cruise 7205.
Symbols as in Figure 2.

Figure 7. Station pattern for CalCOFI Cruise 7207.
Symbols as in Figure 2.

Figure 8. Station pattern for CalCOFI Cruise 7210.
Symbols as in Figure 2.

Figure 9. The basic station plan for CalCOFI cruises from 1950 to the present.

TABLE 1. Station and plankton tow data for CALCOFI cruises in 1972. Counts for fish eggs and larvae are not adjusted for standard haul factor or percent of sample sorted.

TABLE 5. Summary of pooled occurrences of all larval fish taxa taken on CALCOFI surveys from 1972 to 1981. Data for 1974, 1977, and 1980 represent single cruises that are part of surveys in 1975, 1978, and 1981, respectively. Taxa are listed in the same order as Table 4.

NAME	1972	1974	1975	1977	1978	1980	1981

INDEX

This index lists taxa included in Table 4 with their page numbers.

	Page
Elopiformes	
<i>Albulidae</i>	
<i>Albula vulpes</i>	62
<i>Anguilliformes</i>	62
<i>Clupeiformes</i>	
<i>Clupeidae</i>	
<i>Etrumeus acuminatus</i>	62
<i>Sardinops sagax</i>	62
<i>Engraulidae</i>	
<i>Engraulis mordax</i>	63
<i>Salmoniformes</i>	
<i>Argentinidae</i>	
<i>Argentina sialis</i>	67
<i>Microstoma microstoma</i>	68
<i>Nansenia candida</i>	69
<i>Nansenia crassa</i>	70
<i>Bathylagidae</i>	
<i>Bathylagus</i> spp.	71
<i>Bathylagus longirostris</i>	73
<i>Bathylagus milleri</i>	73
<i>Bathylagus ochotensis</i>	73
<i>Bathylagus pacificus</i>	77
<i>Bathylagus wesethi</i>	78
<i>Leuroglossus stilbius</i>	80
<i>Opisthoproctidae</i>	
<i>Bathylychnops exilis</i>	84
<i>Dolichopteryx longipes</i>	84
<i>Osmeridae</i>	84
<i>Stomiiformes</i>	85
<i>Gonostomatidae</i>	
<i>Cyclothona</i> spp.	85
<i>Danaphos oculatus</i>	87
<i>Diplophos taenia</i>	88
<i>Ichthyococcus</i> spp.	89
<i>Valencienellus stellatus</i>	89
<i>Vinciguerria lucetia</i>	89
<i>Vinciguerria poweriae</i>	92
<i>Sternopychidae</i>	93
<i>Stomiatoidea</i>	
<i>Chauliodontidae</i>	
<i>Chauliodus macouni</i>	96
<i>Idiacanthidae</i>	
<i>Idiacanthus antrostomus</i>	98
<i>Malacosteidae</i>	
<i>Aristostomias scintillans</i>	98
<i>Melanostomiidae</i>	

	Page
<i>Bathophilus</i> spp.	99
<i>Eustomias</i> spp.	99
<i>Tactostoma macropus</i>	99
Stomiidae	
<i>Stomias atriventer</i>	99
Myctophiformes	101
Alepisauroidae	
Evermannellidae	101
Paralepididae	102
<i>Lestidiops ringens</i>	102
<i>Notolepis risso</i>	104
<i>Stemonosudis macrura</i>	104
Aulopoidei	
Aulopidae	
<i>Aulopus</i> spp.	104
Chlorophthalmoidei	
Notosudidae	
<i>Scopelosaurus</i> spp.	105
Scopelarchidae	
<i>Benthalbella dentata</i>	105
<i>Rosenblattichthys volucris</i>	105
<i>Scopelarchoides nicholsi</i>	105
<i>Scopelarchus</i> spp.	106
Myctophoidei	
Myctophidae	106
Lampanyctinae	
<i>Bolinichthys</i> spp.	109
<i>Ceratoscopelus townsendi</i>	109
<i>Diaphus</i> spp.	110
<i>Lampadæna urophaeos</i>	113
<i>Lampanyctus</i> spp.	113
<i>Lampanyctus regalis</i>	117
<i>Lampanyctus ritteri</i>	117
<i>Notolychnus valdiviae</i>	120
<i>Notoscopelus resplendens</i>	120
<i>Stenobrachius leucopsarus</i>	121
<i>Triphoturus mexicanus</i>	124
Myctophinae	
<i>Benthosema pterota</i>	127
<i>Diogenichthys atlanticus</i>	127
<i>Diogenichthys laternatus</i>	128
<i>Electrona rissoii</i>	131
<i>Gonichthys tenuiculus</i>	131
<i>Hygophum</i> spp.	133
<i>Hygophum atratum</i>	133
<i>Hygophum reinhardtii</i>	135
<i>Loweina rara</i>	135
<i>Myctophum aurolaternatum</i>	135
<i>Myctophum nitidulum</i>	136
<i>Protomyctophum crockeri</i>	136
<i>Protomyctophum thompsoni</i>	140

	Page
<i>Symbolophorus californiensis</i>	140
<i>Tarletonbeania crenularis</i>	142
Synodontoide	
Synodontidae	
<i>Synodus</i> spp.	145
Gadiformes	
Bregmacerotidae	
<i>Bregmaceros</i> spp.	146
Gadidae	146
<i>Microgadus proximus</i>	146
Merlucciidae	
<i>Merluccius productus</i>	147
Moridae	150
<i>Physiculus</i> spp.	150
Macrouridae	150
Ophidiiformes	151
Bythitidae	
<i>Brosmophycis marginata</i>	151
Carapidae	151
Ophidiidae	
<i>Chilara taylori</i>	151
<i>Ophidion scrippsae</i>	152
Lophiiformes	
Antennarioidei	
<i>Antennariidae</i>	152
Ceratioidei	152
Lophioidei	
<i>Lophiidae</i>	152
Gobiesociformes	
<i>Gobiesocidae</i>	152
Beloniformes	
Hemiramphidae	
<i>Oxyporhamphus micropterus</i>	152
Scomberesocidae	
<i>Cololabis saira</i>	153
Atheriniformes	
<i>Atherinidae</i>	153
Lampriformes	
<i>Trachipteridae</i>	153
Mirapinnatoidei	
<i>Eutaeniophoridae</i>	154
Beryciformes	
Melamphaidae	
<i>Melamphaes</i> spp.	155
<i>Poromitra</i> spp.	158
<i>Scopelogadus bispinosus</i>	158
Syngnathiformes	
Macroramphosidae	
<i>Macroramphosus gracilis</i>	159
Syngnathidae	
<i>Syngnathus</i> spp.	159

Scorpaeniformes	
Cottoidei	
Agonidae	159
Anoplopomatidae	
<i>Anoplopoma fimbria</i>	160
Cottidae	160
<i>Scorpaenichthys marmoratus</i>	160
Cyclopteridae	161
Hexagrammidae	161
<i>Oxylebius pictus</i>	161
<i>Zaniolepis</i> spp.	161
Scorpaenoidei	
Scorpaenidae	162
<i>Scorpaena</i> spp.	162
<i>Sebastes</i> spp.	162
<i>Sebastes aurora</i>	167
<i>Sebastes jordani</i>	167
<i>Sebastes levis</i>	168
<i>Sebastes macdonaldi</i>	169
<i>Sebastes paucispinis</i>	169
<i>Sebastolobus</i> spp.	171
Triglidae	
<i>Prionotus</i> spp.	172
Perciformes	
Blennioidei	173
Bathymasteridae	173
Blenniidae	
<i>Hypsoblennius</i> spp.	173
Clinidae	173
Gobioidei	
Gobiidae	174
Microdesmidae	175
Icosteoidei	
Icosteidae	
<i>Icosteus aenigmaticus</i>	176
Labroidei	
Labridae	176
<i>Halichoeres</i> spp.	176
<i>Oxyjulis californica</i>	176
Pomacentridae	177
<i>Chromis punctipinnis</i>	177
Mugiloidei	
Mugilidae	
<i>Mugil</i> spp.	177
Percoidei	
Apogonidae	
<i>Howella brodiei</i>	177
Bramidae	
<i>Brama</i> spp.	178
Carangidae	178
<i>Seriola lalandi</i>	178
<i>Trachurus symmetricus</i>	178

	Page
Coryphaenidae	
<i>Coryphaena hippurus</i>	180
Gerreidae	180
Haemulidae	180
Kyphosidae	
<i>Medialuna californiensis</i>	180
Malacanthidae	
<i>Caulolatilus princeps</i>	181
Sciaenidae	181
Serranidae	182
Scombroidei	
Gempylidae	182
Scombridae	
<i>Auxis</i> spp.	183
<i>Sarda chiliensis</i>	183
<i>Scomber japonicus</i>	183
<i>Thunnus albacares</i>	183
Trichiuridae	
<i>Lepidopus xantusi</i>	183
Stromateoidei	
Centrolophidae	
<i>Icichthys lockingtoni</i>	184
Nomeidae	
<i>Cubiceps pauciradiatus</i>	185
<i>Psenes pellucidus</i>	186
<i>Psenes sio</i>	186
Stromateidae	
<i>Peprilus simillimus</i>	186
Tetragonuridae	
<i>Tetragonurus cuvieri</i>	187
Trachinoidei	
Chiasmodontidae	187
Uranoscopidae	187
Pleuronectiformes	187
Pleuronectoidei	
Bothidae	188
<i>Bothus</i> spp.	188
Paralichthyidae	
<i>Citharichthys</i> spp.	188
<i>Citharichthys stigmaeus</i>	191
<i>Cyclopsetta</i> spp.	193
<i>Hippoglossina stomata</i>	193
<i>Paralichthys californicus</i>	194
<i>Syacium ovale</i>	194
<i>Xystreurus liolepis</i>	195
Pleuronectidae	
<i>Glyptocephalus zachirus</i>	195
<i>Hypsopsetta guttulata</i>	195
<i>Isopsetta isolepis</i>	195
<i>Lepidopsetta bilineata</i>	195
<i>Lyopsetta exilis</i>	196
<i>Microstomus pacificus</i>	196

	Page
<i>Parophrys vetulus</i>	197
<i>Platichthys stellatus</i>	198
<i>Pleuronichthys coenosus</i>	198
<i>Pleuronichthys decurrens</i>	198
<i>Pleuronichthys ritteri</i>	198
<i>Pleuronichthys verticalis</i>	198
<i>Psettichthys melanostictus</i>	199
Soleoidei	
Cynoglossidae	
<i>Sympodus</i> spp.	199
Disintegrated fish larva	200
Unidentified fish larva	204

RECENT TECHNICAL MEMORANDUMS

Copies of this and other NOAA Technical Memorandums are available from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22167. Paper copies vary in price. Microfiche copies cost \$4.50. Recent issues of NOAA Technical Memorandums from the NMFS Southwest Fisheries Center are listed below:

- NOAA-TM-NMFS-SWFC- 99 Ichthyoplankton and station data for California Cooperative Oceanic Fisheries Investigations survey cruises in 1968.
E.M. SANDKNOP, R.L. CHARTER, H.G. MOSER, C.A. MEYER,
and A.E. HAYS
(January 1988)
- 100 Ichthyoplankton and station data for California Cooperative Oceanic Fisheries Investigations survey cruises in 1969.
E.G. STEVENS, R.L. CHARTER, H.G. MOSER, and L.R. ZINS
(January 1988)
- 101 Hawaiian monk seal population monitoring, pup captive maintenance program, and incidental observations of the green turtle at Kure Atoll, 1985.
M.L. REDDY and C.A. GRIFFITH
(January 1988)
- 102 Hydrographic observations in the northwestern Weddell Sea marginal ice zone during March 1986.
D.M. HUSBY and R.D. MUENCH
(January 1988)
- 103 Deep-sea shrimp trapping for *Heterocarpus laevigatus* in the Hawaiian Archipelago by a commercial fishing vessel.
D.T. TAGAMI and S. BARROWS
(March 1988)
- 104 Report of ecosystem studies conducted during the 1986 eastern tropical Pacific dolphin survey on the research vessel *McArthur*.
V.G. THAYER, B.G. McDONALD, J.M. ELLINGSON, C.W. OLIVER,
D.W. BEHRINGER and S.B. REILLY
(March 1988)
- 105 Report of ecosystem studies conducted during the 1986 eastern tropical Pacific dolphin survey on the research vessel *David Starr Jordan*.
V.G. THAYER, R.L. PITMAN, K.A. RITTMMASTER, G.G. THOMAS,
D.W. BEHRINGER and S.B. REILLY
(March 1988)
- 106 An economic analysis of lobster fishing vessels performance in the Northwestern Hawaiian Islands.
R.P. CLARK and S.G. POOLEY
(April 1988)
- 107 The Hawaiian monk seal and green turtle on Pearl and Hermes Reef, 1986.
R.G. FORSYTH, D.J. ALCORN, T. GERRODETTE and W.G. GILMARTIN
(April 1988)
- 108 A review of California entangling net fisheries, 1981-1986.
S.F. HERRICK, JR. and D. HANAN
(June 1988)
